Personal Statement

Currently studying software engineering at Sheffield Hallam University, and on target to achieve a first-class degree. I am experienced in C# and have developed numerous applications with ASP.NET. I aim to grasp a deeper understanding in C# and have broad knowledge of other object-oriented languages and technologies.

Skills

Programming Languages	Technologies	Tools
C#	ASP.NET	Visual Studio Code
HTML5	Git	Visual Studio
CSS3		

Experience

Elanco Rebates Project – during the first year, I was given the opportunity to work with a client, Elanco, to simplify the customer experience of completing a rebates form. This project enhanced my ability to talk to clients effectively and to efficiently work as a team to develop the proposed solution, which was built using C# ASP.NET.

Projects

SHUber	A high-fidelity prototype, similar to Uber, SHUber, is a modern taxi service making it easier to book a taxi, built with C# WinForms using agile/scrum methodology.
Recipe Viewer Application	A simple application to view recipes, built with C# ASP.NET with a SQL relational database to store and retrieve recipes.
Self-Checkout System	Simulates how real-world self-checkout machines could work, built using C# WinForms and a SQL database.
To-do Application	A simple to-do application for checking and unchecking items in a to-do list, built using C# WinForms.

Education

Sheffield Hallam University
BEng Software Engineering, 2020-present.
GCSE's and A-Levels
3 A-Levels including Information Technology and 8 GCSE's including Maths and English, 2015-2017.
